SOUND SYSTEM EDITION WEEK 1

WHY DO WE NEED A NEW SOUND SYSTEM AND PROJECTORS?

Our current sound system was not designed for this building design. We did have additional speakers in the past, that are now not working. This project started last fall when church leaders discovered people were not coming to service because they couldn't hear. A sub-committee was appointed by Trustees, to review, recommend and find companies that can fix this issue.

Through conversations a temporary fix was identified, but it does not solve all the problems of 'dead spot' that the sound doesn't travel to - Currently the choir area is very difficult, the singers struggle to hear each other. The projectors are now over 20 years old, the picture is not always quality, the projectors don't always turn on, and the technology has improved greatly.
